

Future Leap Consultancy:

Your journey to net-zero

The climate crisis is already here and we need to act.

Future Leap is here for organisations who understand the urgency of the situation and want to do all they can to be part of the solution.

Measure what matters:

Measuring scope 3 emissions is crucial if an organisation's true climate impact is to be understood. Future Leap's emissions reports will include as many scope 3 categories as necessary.

Clarity through simplicity:

Our reporting is clear and straightforward. A carbon footprint will help to create actionable priorities for your next steps.

Offsetting is not enough:

Carbon offsetting in isolation is not a viable solution to the climate crisis. Future Leap's climate advice will always prioritise operational and value-chain decarbonisation.

Treat causes not symptoms:

Net-zero requires deep systemic change. Meaningful and lasting change requires organisations to develop a sustainability focused internal culture. We are here to help you facilitate this change.

We need to act now:

Talking is easy and taking action is hard. Measurement and reporting are only valuable if it results in meaningful progress. Future Leap offer an end-to-end service designed to help organisations who want to be a part of the solution.

Sustainability is for everyone:

It is essential that everyone in your organisation understands and supports climate action. Future Leap will support you through training, knowledge sharing and skills needed to make a difference.

Benefits of progressing towards net-zero

- ✓ Cost savings: Energy efficiency and reduced waste
 - ✓ Recruitment and retention of staff
 - ✓ Gaining competitive advantage: Attracting sustainability conscious consumers
 - ✓ Regulatory compliance and future-proofing against further legislation
 - ✓ Risk mitigation and diversification
 - ✓ Encouraging innovation
-

Sustainability as a service

Our team of sustainability consultants will analyse your organisation and provide specific advice tailored to your individual needs. We provide data driven insights and identify achievable pathways to a more sustainable future for your business.

- ✓ Accurate, clear, concise emissions reporting
 - ✓ Practical, achievable decarbonisation advice
 - ✓ Support with compliance and certifications
 - ✓ Access to ongoing support and peer-based knowledge sharing
 - ✓ Access to low-carbon technology solutions
-

Climate Support Package

Climate Action Plan

- Strategic workshop with leaders and key stakeholders
- Development of sustainability policy
- Scope 3 Carbon emissions profile (a 'carbon footprint')
- Site and operational emissions assessment
- Organisational carbon reduction plan. (Will include analysis of potential for green technology and energy improvements, including local supply chain recommendations and financing options.)
- Carbon impact report and **net-zero** plan with short and long-term science-based target setting.
- Support with effective and greenwash-free climate communications
- Access to ongoing learning and knowledge sharing

Our support includes a year's free membership to the Future Leap network.

Ongoing monthly support includes

- 📅 A monthly catch-up call
- 📅 Yearly re-footprinting and staff working habit surveys
- 📅 Review of the carbon reduction plan and impact report
- 📅 Future Leap are available as your outsourced sustainability team

The Future Leap retrofit team can progress net-zero action through supply and installation of low-carbon technology solutions.

Future Leap Finance can enable your business to take the next steps by offering affordability options from a panel of ethical lenders.

Additional Services

Future Leap's climate action plans are designed to provide a framework for ambitious progression on climate. By understanding your organisations emissions profile or 'carbon footprint' your business can make effective decisions and allocate resource to maximise impact. Future Leap Consultancy offers a range of technical services that provide a "deep dive" into different operational areas, including technical assessments, green technologies, energy solutions and affordability options.

- Green technology assessments
- Renewable energy feasibility studies and integration advice
- B Corp impact assessment coaching and mentoring
- Implementation of environmental management solutions including ISO 14001
- Digital, website and e-commerce sustainability audits
- Supply and install of low-carbon retrofit solutions
